Computational Analysis of Full-Length Mouse Compared with
Ruman Genome Sequence Namm. Genome. 12, 673-677 (2001)
Normalization and subtraction of captraper-selected cDNBs to
prepare full-length CDNA libraries for xapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format
sequencing pipeline with 384 multicapillary sequencer. Genome Res.
10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length CDNA
encyclopedia real-time sequence clustering for construction of a
nonredundant cDNA library Genome Res. 11 (2), 281-289 (2001)
CDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research for Riken contributed to
prepare mouse tissues.

plytaion of Experimental Animal Research in Riken contributed to
prepare mouse tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GSS 01-0CT-2003

Not1; Nouse cDNA project by the Laboratory of Genetics,
National Institute on Aging (NIA). Intramural Research
Program, NIR (http://Jgsun.grc.nia.nih.gov/cDNA). This is
a long-transcript enriched cDNA library (Ref. Genome Res
11: 1553-1558 (2001). [PMID: 11544199]. Total RNAs were
obtained from Drs. Dennis Taub, Dan Longo (Marional
Institute on Aging, USA), Jonathan Keller (National Cancer
Institute, USA). Double-stranded cDNAs were synthesized
with an Oligo(dT) primer [Invitrogen:
5.-pGACTMGTCTGAGACGGCGCCTTTTTTTTTTTTTTTTTTT] from
1.1 ug of total RNA, treated with To DNA polymerase, and
purified by ethanol-precipitation. The cDNAs were ligated
to Lone-linker Li-Sal, purified by phenol/chloroform, and
separated from free linkers by Centricon 100. Then, the
cNAs were amplified by long-range high fidelity PCR using
8x Tag polymerase (Takara) with a primer Salt-S. The
products were purified by phenol/chloroform and Centricon
100 The cDNAs were digested with Sall and Not! enzymes
and cloned into Sall/Not! site of 5990RT1 plasmid vector.
The DH108 B. coll host was transformed with the ligation
mixture by the standard chemical method. The average
insert site is about 2.2 kb. The library was constructed
by Yulan Piao (NIA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BST 23-JUL-2001

CUNA Library Preparation: M.B. Soares Lab Clone distribution:

Researchers may obtain BWAP CUNA clones from RESBARCH GENETICS. It

should be noted that Bento Soares is generating a small number of

additional specialized non-redundant arrays of EMAP CDNAS whose

availability will be considered under appropriate and limited

Construction of long-transcript enriched cDNA libraries from submicrogram amounts of total RNAs by a universal PCR amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Journal "Vector: pCNV-SPORT6 (Invitrogen); Site 1: Sali; Site 2: Not1; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgum.grc.nia.nh.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1533-158 (2001). [PMID: 11544199]): Total RNAS were extracted from a pool of 16 embryos at 9.5-days postcoitum. Double-stranded cDNAs were synthesized with am
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CD554154
B0369A09-5 NIA Mouse E9.5 Whole Embryo cDNA Library (Long) Mus musculus cDNA clone NIA:B0369A09 IMAGB:30435656 5', mRNA sequence.
with an oligo(dT) primer [ArGTGGCCTTTTTTTTTTTT]; double-stranded orDNA was ligated to a DralI adaptor [TGTTGGCTACTGG], digested and cloned into distinct DraIII sites of the pWE188-TE3 vector (5° site CACTGTGG, 3' site CACTGTGTG). XhoI should be used to isolate the cDNA insert. Size selection was performed to exclude fragments also. inharary constructed by Dr. Sumio Sugano (university of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer cracctcranactaccand 3' end primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0, Gaps 0;

Erome.1 ug of total RNA, treated with 74 DNA polymerase,
and purified by ethanol-precipitation. The cDNAs were
ligated to lone-linker il-3all4, purified by
phenol/chloroform, and separated from free linkers by
Centricon 100. Then, the cDNAs were amplified by
long-range high fidelity PCR using Ex Taq polymerase
(Takara) with a primer 8al4-S. The products were purified
by phenol/chloroform and Centricon 100. The cDNAs were
digested with Sal1 and NotI enzymes and cloned into
sal1/NotI site of pCNV-SPORT6 plasmid vector. The DH10B B.
coll host was transformed with the ligation mixture by the
standard chemical method. The average insert size is about
3.0kb. The library was constructed by Yulan Plao."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone lib="NIA Mouse Hematopoietic Stem Cell (Lin-/G-Kit-/Sca-1+) cDNA Library (Long) / Dote="Vector: pSPORT; (Invitrogen); Site 1: Sall; Site_2: Mot1; Mouse cDNA project by the Laboratory of Genetics, Mational Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FRATURES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ORIGIN
            셤
polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored lonk was purified and size-selected for a 9.5 to 10.5 kb range using preparative selected for a 9.5 to inc.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pmn42 (gi|473114|gb|AP139172.1), a copy-umber inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-complement E. coli XLMO-Gold (Stratagene) cells and selected for ampicillin resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Butheria; Rodentia; Sciurognathi; Muridae; Mus.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

ORGANISM: Artificial Sequence
PRATURE
TYPES: DNA
OTHER INFORMATION: Description of Combined DNA/RNA Molecule: The
OTHER INFORMATION: Description of Artificial Sequence: oligomer
NAME/KEY: misc feature
LOCATION: (49)...(88)
OTHER INFORMATION: n is an equimolare mixture of G, A, T and C

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1, M.
